

SC2 DRESSING

Description:

SC2 Dressing by Innovacar is the **most suitable product to dressing, renovate and regenerate** internal and external car components, such as **plastics, vinyl, leather, rubber and acrylic materials** that are worn over time and by atmospheric effects. It offers an optimal solution that is suitable for all needs, thanks to its latest generation water-based formula. Here are the main features of the **car plastics and reviver dressing**, such as dashboards and bumpers, and the **nanotechnological** fabric regenerator:

- **Hydrophobic shield and water repellency:** thanks to its formulation, with siloxanes composed of SiO₂, it is able to create a molecular and chemical barrier similar to that of quartz that protects against UV rays and gives water repellency. While fluoroadditives combine the ability to spread the product evenly without having the "orange peel" effect, with the ability to protect surfaces longer and resist acid and alkaline washes.
- **Withstands high temperatures:** it is free of petroleum distillates and can therefore be applied easily and at extreme temperatures without whitening and releasing oily substances; therefore, it is suitable to withstand the summer heat or the temperatures of the engine compartment.
- **Reduces the ageing of fabrics and leather:** thanks to the protective effect, it can reduce damage due to rubbing and allows the car's fabrics and leather to be more durable.
- **Regenerating and revitalising effect:** the dressing has a deep, non-glossy black effect which, combined with the colour retention properties, lasts up to 5 months.
- **Gentle formula:** it is a hydrocarbon-free product that is even suitable for delicate car surfaces, such as leather, gaskets and plastics.
- **Creamy formula:** thanks to the creamy formula of the product, it does not drip on vertical surfaces.

Directions for use:

How to revive and regenerate car plastics and leather with SC2 Dressing:

1. Clean and decontaminate the surface before using SC2 Dressing.
2. Apply 2-3 sprays of product on a low pile microfibre cloth or on a pad.
3. Apply on the surface to be treated in a crisscross manner, applying the product horizontally from right to left all over the area and then start again vertically, from top to bottom, covering the entire area.
4. After about 20 minutes, the product can be reapplied to enhance its colour depth.
5. Wait up to 7 hours after the application for complete activation. The effect lasts up to 5 months.

Use: use the product undiluted.

For maintenance or a less lasting effect: the dilution can be up to 1:5, i.e. use 170 ml of product and fill the remainder with water (830 ml) to obtain 1 L of ready-to-use solution.

Precautions: Do not apply the product on the tread. The best performance is obtained with a clean surface.

Caution:

Observe the advice on the safety data sheet when handling the product.

Technical features:

Appearance and colour: white liquid

Odour: characteristic

pH: 6.6 ± 0,5

Flash point: >100°C

Relative density: 0.98 g/cm³ ± 0,05
